

## Forklift Warning Systems Ensure Your Employees' Safety

ALERT Safety engineers are continually studying challenges and identifying problems—now and for the future—in the workplace. Our leading-edge products include the following ALERT technology systems:

**Directional Worker Alert**—Using Microwave Sensor technology, warns pedestrians and forklift operators of approaching vehicles at intersections, blind corners, and doors.

**Convex Mirror Systems\***, 26" or 36" and **Mirror Alert Domes**, 36" or 48"

Sensor detects approaching forklift, turning passive mirror into an active alarm. Dome mirrors available with optional flashing LED floor spot light.

Mirror Alert Dome\*

**LED Caution Sign**—Warns pedestrians of approaching forklifts, with a flashing LED Caution and directional arrow.

Office Alert

**Office Alert**, 6" x 10"—Small LED display for offices and doorways; warns pedestrians of approaching forklift, before they step into the aisle.

**Zone Alert**—Photo sensor system warns workers and other forklift operation that an area is occupied. Counts forklifts in and out of an area, keeping the alarms on until the last forklift has left.

**Limit Alert**—Limits the speed of the forklift as it enters and exits a specific manufacturing area.

**Crane**—Microwave sensors detect the overhead crane on approach, warning pedestrians and forklift operators.

**Dock**—Warns pedestrians and other drivers that a forklift is inside the trailer.

**Range**—Measures the distance of forks in the pallet to prevent load tipping and damaged goods.

LED Caution Sign
