

Forklift Activated Safety Projector

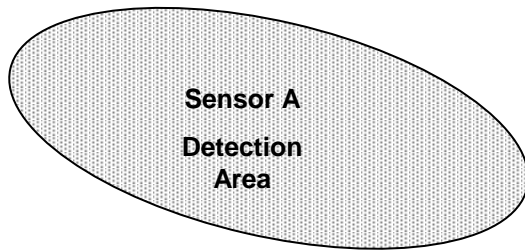

Warns Pedestrians of approaching Forklift's at blind corners and intersections.

Projected message is activated by forklifts approaching the walkway, it is not activated by pedestrians or forklifts going away from the walkway.

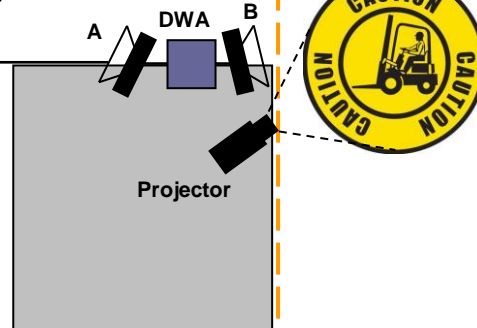

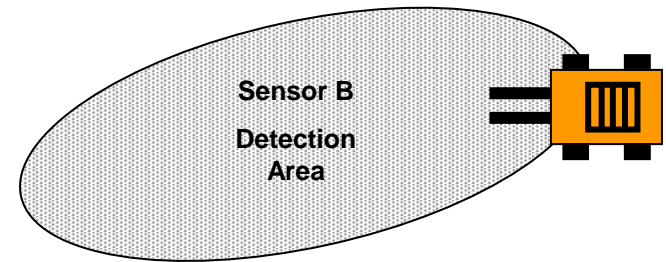

System can be customized to meet your needs.

Other images are available for projectors.

Projectors can be used with other ALERT Safety Warning devices.

Pedestrian Walkway

Blind Corner

The system will time out and reset after a selected timeout period that allows enough time for the forklifts to exit the area.

Microwave sensors have an adjustable range up to 55' with an approximate field width of 12' at 35'. We recommend setting the sensors so there is a 2 to 4 second advance warning before the forklift enters the area.

The Project Alert System is powered by a 40W Class II Transformer that should be located within 100' of the DWA.

The projector has a 3' power cord that plugs into a 120VAC outlet.

A remote control is used with the system to read and change the sensor settings from the floor.
