

Mirror Alert System will flash "CAUTION" and the left or right directional arrow in the cross aisles when a forklift approaches the intersection. The LED Floor Light will project a flashing spot on the floor directly below the Dome Mirror when any of the sensors are activated

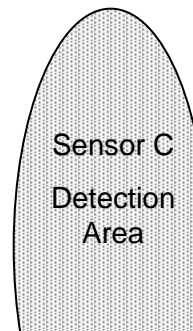

4-Way Dome Mirror Alert with LED Floor Light

The Dome Mirror Alert has an Auxiliary Output Terminal that can be used to activate a remote mounted beacon or audible alarm. The 24VDC output will be on when any of the sensors are activated.

The system will time out and reset after a selected timeout period that allows enough time for the forklifts to exit the area (usually 4 to 6 seconds).

Floor light is projected on floor directly below the mirror.
